Tbilisi, Georgia (UTC+4; 5h overlap with CET, 3h with US East) · Russian passport, Georgian resident · Remote (EOR or B2B) or relocation with visa sponsorship (EU, Cyprus, Dubai) · English C1

SUMMARY

Senior Go Engineer / Tech Lead with 8+ years of experience. Build and run event-driven, high-load backends for iGaming, crypto and fiat payments, and B2B workflow automation: 99.97% availability, ~1k rps, ~99.2% payment success. Design payment systems end to end, from multi-chain rails and ledgers to reconciliation and provider integrations. Set up agentic development workflows (Claude Code / Codex harnesses with test and human-review gates) so small teams ship in days while keeping ownership of correctness. Looking for a hands-on Tech Lead or Senior Backend role.

EXPERIENCE

Tech Lead / Senior Backend Engineer (Go), AI Startup, Canada (NDA), remote 11/2025 – Present

B2B workflow-automation and campaign-messaging platform (SMS, voice, email) for North American SMBs. Core team of 6. Own architecture, write Go daily, run the engineering process.

- **Platform.** 9 Go microservices over NATS JetStream on Kubernetes: workflow engine, campaign orchestration, provider adapters, customer-portal API; idempotent handlers, outbox delivery.
- **Observability.** Prometheus, OpenTelemetry (tail-sampling, PII redaction), OpenSearch, Grafana. Built a Global Observer service joining domain events on trace IDs into a workflow lifecycle, exposed to customers via a JWT org-scoped API.
- **Compliance.** Data residency, retention and PII handling under PIPEDA, Quebec Law 25, GDPR; PCI-DSS scoping for card-data flows.
- **Harness engineering.** Built the company's in-house agentic development harness, used by all engineers: an orchestration system that runs every task through a phase-gated pipeline (spec, plan, implement, verify, review) across Claude Code and Codex with per-phase model routing; a task manager designed for agent work (queue, dependencies, per-task agent assignment, live execution status); a shared knowledge base (LLM-maintained team wiki with semantic search, skills and conventions) that both agents and engineers work from; and a two-stage review process, with cross-model AI review, generated tests and build gates first, then human review by two engineers, payments and auth code human-only. Multi-agent ops layer with human approval gates; tracing and cost control via Langfuse and OpenRouter; delivery metrics per engineer. Cycle time went from weeks to 1–3 days.
- **Stack.** Go, NATS JetStream, PostgreSQL, Redis, Kubernetes, Prometheus, OpenTelemetry, OpenSearch, Grafana, Qdrant, Langfuse, Claude Code, Codex, OpenRouter.

CTO / Hands-on Backend Lead (Go), Gamegram LTD, Cyprus (iGaming) 02/2023 – 03/2026

High-traffic online casino and sportsbook platform. Owned architecture and delivery; led 3 cross-functional teams (50+ engineers across payments, platform and analytics) while writing Go daily.

- **Architecture.** Domain-driven Go microservices with event-driven design (saga/outbox, idempotency, online migrations). 99.97% availability, SLO p95 < 300 ms on core and payments APIs, one production deploy per two-week sprint.
- **Payments.** Multi-provider crypto/fiat orchestration: provider-agnostic adapters, smart routing by country/currency/FTD/LTD, HMAC/RSA signing, webhook verification, retries/DLQ, reconciliation, multi-wallet ledger rules. ~99.2% payment success.
- **Crypto rails.** Non-custodial, multi-chain digital-asset payments layer for the platform and partners: invoicing, hosted checkout, payouts, FX/M2M settlement across 7+ networks; API/SDK with signed webhooks, idempotent order flow, EIP-712 typed-data signing; KYC/AML onboarding and transaction-screening integrations; Cloudflare WAF and bot-management hardening.
- **Game transactions.** Multiple game-provider integrations; ACID wallet rules and idempotent bet/win/void/rollback/bonus APIs at ~1k rps (peaks ~2k), SLO p99 < 180 ms, exactly-once effect at the ledger.
- **Security.** mTLS/TLS, encryption at rest, Vault/KMS secrets with rotation, least privilege and SoD, audit trail for monetary actions with policy-driven retention.
- **Team and process.** Hiring bar and interview loops, career paths, 1:1s; pragmatic Agile; OpenAPI-driven backend/frontend contract with generated clients.
- **Early AI adoption (2024–25).** Copilot/Cursor for all engineers, then Claude Code pilots on backend services: per-repo conventions, agent-generated tests, LLM first-pass PR review, mandatory human review on payments and wallet code. AI-tool proficiency added to the hiring bar.
- **Stack.** Go, gRPC/REST, PostgreSQL, Redis, RabbitMQ, Kubernetes, Terraform, Prometheus, Grafana, OpenTelemetry, Cloudflare, OAuth 2.1/OIDC, Vault.

Senior Full Stack Engineer, IT Only, Moscow

09/2020 – 04/2023

Software house delivering finance and enterprise automation for large Russian corporates.

- **Samolet (finance and construction automation).** End-to-end automation for approvals and core financial workflows: budgeting, milestone-based payments, vendor invoicing, escrow, reconciliation. FICO credit-scoring and pre-approval flows for buyers. BI modules (cash-flow, CAPEX/OPEX, KPI dashboards).
- **Severstal.** Freelance platform for external contractors integrated with enterprise workflows.
- Full delivery cycle from design to optimisation; coding standards and mentoring; performance diagnostics; legacy refactoring. Stack: Go (gRPC/REST), Python (ETL), React 17/18, TanStack Query, Ant Design, PostgreSQL, Redis, Kafka.

SAP ABAP Developer, Ramax Group, Moscow

05/2018 – 09/2020

SAP integrator; projects for Aeroflot group and Moscow Cargo.

- Aeroflot to Federal Tax Service integration (tax monitoring): ERP to FTS data exchange for reliable, compliant reporting.
- Moscow Cargo mail-container distribution: logistics solution for tracking containers across the cargo network.
- Co-developed an SAP-certified offline mobile app for cabin crews; module development for planning and reporting across Aeroflot subsidiaries' ERP.

SKILLS

- **Languages:** Go (primary), Python, TypeScript, SQL.
- **Backend and data:** gRPC/REST, protobuf, PostgreSQL, Redis, NATS JetStream, RabbitMQ, Kafka, event-driven design (outbox/CDC, sagas, idempotency), OpenAPI.
- **Payments and fintech:** Crypto/fiat payment orchestration, non-custodial multi-chain payments (EVM, EIP-712), ledgers and reconciliation, KYC/AML integrations, webhook security (HMAC/RSA), iGaming wallet flows; PCI-DSS, GDPR, PIPEDA.
- **Infra and ops:** Kubernetes, Docker, Terraform, Prometheus, Grafana, OpenTelemetry, OpenSearch, Vault/KMS, Cloudflare, SLO/SLI, on-call.
- **AI-native engineering:** Agentic workflows with Claude Code / Codex CLI: harness and convention design, phase-gated pipelines with test and human-review gates, evaluating and correcting AI-generated code; multi-agent orchestration with approval gates; model routing (OpenRouter / vLLM); LLM-compiled knowledge bases and RAG (Qdrant); Langfuse.

EDUCATION

MSc Computer Science, Software and Service Architecture , Eötvös Loránd University, Budapest	2024
BSc Business Informatics , Higher School of Economics, Moscow	2021
